

COVID-19 BinaxNOW Test Result

Your recent COVID-19 BinaxNOW point-of-care antigen test result is **not detected**. This means that at the time you were tested, the test did not detect antigens of SARS-CoV-2, the virus that causes COVID-19.

This test was not designed for asymptomatic people (people without symptoms).

If you have symptoms, please follow-up with your healthcare provider. If you start to have [symptoms of COVID-19](#), please consider being tested again at that time.

Thank you for taking the time and initiative to be tested. If you have any other questions or concerns, please email covidconcerns@larimer.org, call 970-498-5500, or text your questions anytime to 970-999-1770.

A “Not Detected” result does not rule out COVID-19 and should not be used as the sole basis for treatment or patient management decisions. The possibility of a false negative result should be considered in the context of a patient's recent exposures and the presence of clinical signs and symptoms consistent with COVID-19. The possibility of a false negative result should especially be considered if the patient's recent exposures or clinical presentation indicate that COVID-19 is likely, and diagnostic tests for other causes of illness (e.g., other respiratory illness) are negative. If COVID-19 is still suspected based on exposure history together with other clinical findings, re-testing should be considered. **Risks of a false negative include lack of monitoring of infected individuals and their household or other close contacts for symptoms resulting in increased risk of spread of COVID-19 within the community.** Test parameters have not been validated for screening in asymptomatic patients. This test is only authorized for the duration of the declaration and the circumstances that exist to justify the authorization of the emergency use for the detection of SARS-CoV-2 virus and/or diagnosis of COVID-19 infection under section 564(b)(1) of the Act, 21 U.S.C. 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

Resultado de la Prueba COVID-19

El resultado de su prueba COVID-19 reciente es **not detected**.

Esto significa que en el momento en que se le realizó la prueba, la prueba no detectó antígenos del SARS-CoV-2, el virus que causa el COVID-19.

Esta prueba no fue diseñada para personas asintomáticas (personas sin síntomas).

Si tiene síntomas, consulte con su proveedor de atención médica. Si comienza a tener [síntomas de COVID-19](#), considere la posibilidad de hacerse la prueba nuevamente en ese momento.

Gracias por tomarse el tiempo y la iniciativa para realizar la prueba. Si tiene otras preguntas o inquietudes, llame a nuestra línea de información de lunes a viernes de 9 a.m. a 4:30 p.m. al 970-498-5500. Envíe sus preguntas por mensaje de texto en cualquier momento al 970-999-1770.
